

Promoting Regular and Ongoing Curriculum Review Cycles

Curriculum Review Cycles

Leaders and teachers must evaluate and regularly review the quality of the written curriculum.

Determine the overarching topic and identify the focus questions

Gather the data that will inform your review based on your questions

Closely study, ask questions and make observations of the data

Draw conclusions and determine actionable steps for continued growth

Share findings, results and next steps

The initial curriculum process includes the framework of **articulating your purpose**, **setting curriculum goals** and **designing a unit template**.

Regular and ongoing review cycles are a critical component and should be thoughtfully included in the **written plan** for curriculum development.

Curriculum Review Cycles

Here are additional questions that support the planning of a successful review.

- Who will be conducting the review?
- What guidance and professional learning is needed to conduct a successful review?
- What are potential challenges and what proactive steps could address them?
- Where will the work be documented to ensure effective communication?
- What is the timeline for the work?
